Press Release

Secardeo presents certBox PKI appliance at CeBIT for the first time

No. 1/ 2009

Secardeo certBox implements PKI-Interworking and makes external end-to-end E-Mail encryption useable

Ismaning, February 4th, 2009 – Secardeo GmbH will present their new certBox PKI appliance at CeBIT in hall 11, stand B58/1 for the first time. Further solutions for public key infrastructures (PKI) and digital signatures will be shown as well. E-Mail encryption with external partners is drastically simplified with Secardeo certBox and the benefit of existing enterprise PKI's is significantly increased herewith.

The certBox will be installed in a DMZ and it provides public key certificates to e-mail clients which are required for encrypting in- and outgoing messages. The certBox performs a global certificate search in a unique fashion and it serves as a public PKI repository as well.

Today's major certificate repositories containing millions of user certificates are already pre-configured in the certBox. The public access to the company's own certificates is provided using secure and patented methods which detect and block attack attempts and encrypt sensitive data. The search for certificates can be automated used via LDAP by E-mail-clients like Outlook or manually via HTML-search-forms. S/MIME and X.509 as well as PGP will be supported.
